

You can help improve the diagnosis and care of children by **participating in our study!**

CALIPER

'ARM' us with the knowledge to help others

Who can participate?

Healthy children and teens from birth to 20 years old.

What is CALIPER?

CALIPER is a nation-wide initiative working to establish a database of healthy blood test values in children. Currently there are critical gaps in pediatric blood test values which can lead to the misdiagnosis of childhood disease. To address these gaps, the CALIPER team is creating a new database from samples collected from healthy Canadian children and young adults.

What does participation involve?

1. Completion of a consent form and questionnaire
2. Waist, height and weight measurements
3. A small blood donation

It only takes 20 minutes!

How will I benefit?

- Choice of t-shirt OR teddy bear
- Two volunteer hours
- \$10 honorarium
